In the late 1970's, from a small music shop in Essex, England emerged the first Trace amplifier.

Using their accumulated knowledge of backline amplification, the next step for the engineers at Trace Elliot was to build the world's most versatile acoustic amp. With great respect between audible amplification without impeding the delicate dynamics of the acoustic performance, Trace Elliot developed sophisticated technologies. The Trace Acoustic line has become the industry standard and is now used around the world by countless guitarists, fiddle players, banjo players, and violinist.
